Protocol Identification by Heuristic Content Analysis

ABSTRACT OF THE DISCLOSURE

A system and method are disclosed for providing network traffic identification. In one embodiment, the method comprises receiving pattern matching data; comparing

5   the pattern matching data with a pattern; and determining whether the pattern matching data matches the pattern. In one embodiment, the system comprises an interface configured to receive pattern matching data and a processor configured to: compare the pattern matching data with a pattern and determine whether the pattern matching data matches the pattern.
